

# PRÜFSTELLE TEXTIL

Durch die Deutsche Akkreditierungsstelle GmbH nach DIN EN ISO/IEC 17025 akkreditierte Prüfstelle.  
Die Akkreditierung gilt auch für Produkte im Sinne der Richtlinie 89/686/EWG. Nicht im Akkreditierungsumfang enthaltene Prüfverfahren sind mit einem \* gekennzeichnet.

SÄCHSISCHES  
TEXTIL  
FORSCHUNGS  
INSTITUT e.V.

Von der Federation Internationale de L'Automobile (FIA) Paris zugelassene Stelle zur Prüfung von hitze- und flammresistenter Schutzkleidung für Auto-Rennfahrer gemäß Standard FIA 8856-2000

## UNTERSUCHUNGSBERICHT | TESTREPORT

**Order number STFI:** 20181490.1

**Report date:** 20 June 2018  
**Person responsible:** Reinhardt

**Orderer:**  
DELIUS GmbH  
Angelika Schmidt-Koch  
Goldstr.16-18  
33602 Bielefeld

**Test order:**  
**Date:** 13 June 2018  
**Order received:** 14 June 2018  
**Material received:** 14 June 2018

Es gelten die allgemeinen Geschäftsbedingungen des STFI e. V. und der ITT GmbH · The general terms of business of STFI e. V. and ITT GmbH are valid.  
Das Leistungsverzeichnis der Prüfstelle des STFI e. V. ist zu finden unter <http://www.stfi.de/dienstleistungen/pruefung.html>

**Material to analyse:**

1 samples sun protective material

signed by client	code for order processing
Sample 29443-1551 „Sisto Dimout“	P1490_18_1

The sampling was supplied by the client. The test department is not informed about the sampling procedure.

**Analysis content:**

- (1) Remission and transmission in the visible light range in accordance with DIN EN 410: 2011-04 (DIN EN 14500: 2008-08)
- (2) Remission and transmission in the global radiation range in accordance with DIN EN 410: 2011-04 (DIN EN 14500: 2008-08)
- (3)\* Calculation of the total energy permeability degree  $g_{tot}$  of a window system with sun protective material, following DIN EN ISO 52022-1: 2018-01 and approximate calculation of the reduce factor  $F_c$  following DIN EN 14501: 2006-02
- (4) Spectral values in the radiation range 300nm – 2500nm

\* Standards for calculation and assessment are not allowed for accreditation

**Conditions and equipment for optical tests:**

test parameter	symbol	range of radiation
light transmission degree	$\tau_{v,n-h}$	380...780 nm (standard light D65)
light remission degree	$\rho_{v,n-h}$	380...780 nm (standard light D65)
light absorption coefficient	$\alpha_v$	380...780 nm
UV - transmission degree	$\tau_{uv}$	280...380 nm (UV-radiation)
solar transmission degree	$\tau_{e,n-h}$	280...2500 nm (global radiation)
solar remission degree	$\rho_{e,n-h}$	280...2500 nm (global radiation)
solar absorption coefficient	$\alpha_e$	280...2500 nm

Equipment: UV/Visible/NIR spectrophotometer Lambda 900, PERKIN - ELMER Corp., USA; 150 mm integrating sphere; irradiation perpendicular to the integrating sphere opening; 8° slope of the sample area to the light incidence axis for remission measurements

For each material sample of the client three samples in the format (55 x 75) mm are taken, one in the machine direction, one in the cross machine direction and one diagonally. The irradiation takes place, if not otherwise noted, on the material side which is faced to the window system (marked by the client). During the measurement an circular area with a diameter of 25 mm (integrating sphere port) is covered by the sample.

**Test results:****(1) Light range****UV-range**

Code	light transmission degree	light remission degree	light absorption coefficient	UV-transmission degree
P1490_18	$\tau_{v,n-h}$	$\rho_{v,n-h}$	$\alpha_v$	$\tau_{uv}$
1	0,0000	0,6607	0,3393	0,0000

**(2) Global radiation range**

Code	solar transmission degree	solar remission degree	solar absorption coefficient
P1490_18	$\tau_{e,n-h}$	$\rho_{e,n-h}$	$\alpha_e$
1	0,0013	0,6260	0,3727

**(3)\* Total energy permeability degree  $g_{tot}$  and reduce factor  $F_c$** 

	Single glazing		Double glazing with air interspace		Double glazing with low emission degree and argon interspace		Triple glazing with low emission degree and argon interspace	
Code	$U_g=5,8 \text{ W}/(\text{m}^2\text{K})$	$g=0,85$	$U_g=2,9 \text{ W}/(\text{m}^2\text{K})$	$g=0,76$	$U_g=1,2 \text{ W}/(\text{m}^2\text{K})$	$g=0,59$	$U_g=0,8 \text{ W}/(\text{m}^2\text{K})$	$g=0,55$
P1490_18	$g_{tot}$	$F_c$	$g_{tot}$	$F_c$	$g_{tot}$	$F_c$	$g_{tot}$	$F_c$
1	0,35	0,41	0,37	0,49	0,36	0,62	0,36	0,65

**Mounting assumptions:**

- sun protective material inside and closed
- aerated interspace to the glazing

The mathematical model in DIN EN ISO 52022-1: 2018-01 (simplified method) for calculation of  $g_{tot}$  is appropriated to a coarse compare of sun protection materials. The model is only valid for the following boundary requirements:

- $0 \leq \tau_{e,n-h} \leq 0,5$
- $0,1 \leq \rho_{e,n-h} \leq 0,8$

If the above mentioned boundary requirements are not fulfilled, the calculation of  $F_c$  from  $g_{tot}$  and  $g$  is not guaranteed either. The calculation is recommended in accordance with DIN EN ISO 52022-3: 2018-01 (detailed calculation method). Therefore it is necessary to measure reflection to the not the radiation exposed side and thickness at least in addition to the data of this order. In case of known conditions to be used at a building it is unalterable.

The results are mean values from three measurements; spectrograms are kept in the test department.

#### (4) Spectral values

Unless otherwise agreed, all materials we received within this order will be kept for a maximum time of 6 month. Materials which are not stored because of technical or safety reasons are excluded from that

The testing period is defined as timeframe between receipt of samples and issue date of test report.

The test results are referring to the submitted samples. These test report is not allowed to copy in parts.
